(Member6100) writes:I sent off for a demo disk for RadioRunner...etc.

     Oops, I was a little confused. KE6FG software was listed in Ham Radio
for the Macintosh as a control program for ICOM radios. This is the letter
that was returned. I haven't received the demo disk for RadioRunner yet
(it hasn't been that long) but it is published by another company.

     I still would be interested in the wherabouts of KE6FG Software or
any experiences anyone has with remote controlling ICOMS with Macs.
Thanks.

Subject: ?RadioRunner Program/KE6FG Software wherabouts/experience?
To: info-hams@ucsd.edu

      I sent off for a demo disk for RadioRunner - a radio control,
shortwave schedule/log, and greyline clock program. A partial demo was
contained in "Greyline Clock" found in the Ham Radio Library on AOL. It
was apparently downloaded sometime around 1991-1992. My letter to the
Tujunga, CA address was returned as "forwarding order expired."

  Does anybody
  1) know the wherabouts of KE6FG software?(if it is still a live entity)
and
  2) any experience with this program (or something similar) and have any
recommendations?

      I am trying to control an ICOM 735 via a Macintosh SE-30 and use it
mainly for SWL. Thanks a whole bunch in advance for your Email or
newsgroup reply.
                                                            Scott

ALL PLEASE NOTE!!

This is about N6NHG... NOT N6MHG !!! :-)

I heard this report on a local repeater last night and had to do a double take.
It's kind of eerie sounding thinking you hear your call and you are wanted by
police. <grin>

: When I was a young pup it seemed that all cars had a piece of rubber
: dangling between the car frame and the pavement - anyone else
: remember this? Was it for static discharge?

: Jeff NH6IL

I was talking to my dad tonight and asked him if he remembers what those
rubber strips were on old cars. He said they had braided metal wire in
them, and that yes, they were for static discharge. I guess as the car
is moving, the wind under the car would lift these strips up into the
air, but that as the car stopped, they would touch the ground. I drive a
VW Quantum and get shocked almost everytime I get out - kind of annoying.

Subject: Building a cable and talking to a Kenwood TS-50
To: info-hams@ucsd.edu

Hi,

I am looking for information on how to build a serial cable
for my Kenwood TS-50. Kenwood wants $100 and MFJ is now

selling one for $50. After saving for over a year for the radio
I really can't spend even $50. Since MFJ is making one, it can't
be too hard. If anyone can tell me how, I would really appreciate
it. Also, if possible I would like to know how to talk to the radio
after building a cable. Does anyone have this information?

Please respond by e-mail so that I can summarize for everyone else.
Also, my news feed only works occasionaly and I might miss a general
response.

My address is: levin@cosmic.physics.utah.edu

Thanks in advance.

-Chris Levin

Subject : Re: The Amateur Radio Service is a Joke

-----BEGIN PGP SIGNED MESSAGE-----

I'm entirely agreeing with Bill here. As an ARRL member myself,
a General Class amateur licensed for 7 months, intrested in the
hobby for alot longer than that, a member of the local ARES/RACES
organization, emergency responder, and other applicable positions,
I thing that there is nothing wrong with this hobby, it's regulation,
and examination and licensing procedures except for the time it
takes to get your license.

This hobby is well-patrolled with "radio cops". Our local repeater
has a person on top of the bootlegger about 5 minutes after (s)he's
on the air. We also have one of the best DF'ers in the country right
in our area who tracks down many-a-jammers. The Volunteer
Examiner program is one that releives the burden off of the FCC
and makes OUR job of getting a license easier by not having to
hike it 20 miles to the nearest FCC Field Office.

Whatever your problem with the hobby is...get over it.

Sounds like interest to me.  Ed, elt@irony.com sorta volunteered to
get an ATV mail list going.  How 'bout it, Ed.
